

Table IV. Sensitivity, specificity, accuracy, positive predictive value (PPV) and negative predictive value (NPV) for prediction of lymphocyte-predominant breast cancer using tumour-infiltrating lymphocytes (TIL)-ultrasonography (US) and TIL-contrast-enhanced ultrasonograph (CEUS) scores. We set the TIL-US score cutoff for predicting LPBC at ≥ 4 points (19), and that of TIL-CEUS at ≥ 6 points.

Score by	Performance measure				
	Sensitivity	Specificity	Accuracy	PPV	NPV
TIL-US	0.94 (0.77-0.99)	0.75 (0.70-0.77)	0.80 (0.72-0.82)	0.55 (0.45-0.58)	0.98 (0.91-1.00)
TIL-CEUS	0.94 (0.78-0.99)	0.86 (0.8-0.87)	0.88 (0.80-0.90)	0.68 (0.56-0.71)	0.98 (0.92-1.00)
